PROFILE

Software engineer who takes systems from design through to operated production.

Delivering AI workflow automation for a UK enterprise client since November 2025, while independently building and running three multi-tenant SaaS platforms — one used daily inside a hospital, one live commercially with subscription billing. Strong full-stack foundations (Node.js, PostgreSQL, TypeScript, cloud) combined with modern AI-assisted development practice; personally accountable for architecture, code review, security, tenant isolation, and production operations.

Software Engineer — Vedha IT Solutions Pvt Ltd (Remote, India)

Nov 2025 – Present

Deployed to a UK-based client on an enterprise operations platform.

- Operate a self-hosted n8n automation platform on Azure, configured with Redis queued execution so multiple customers' production workflows run reliably at scale.
- Shipped production AI workflows for client businesses — WhatsApp customer-support chatbots, multi-tool booking agents, and automated CV screening that evaluates candidates and emails recruiters ranked summaries (Azure OpenAI, MongoDB, Azure Blob Storage).
- Cut new-client chatbot onboarding to a zero-touch process by generating workflow configurations programmatically — credentials, tokens, webhooks — and deploying them through the n8n REST API.
- Built the platform's engineering knowledge base from scratch: 1,500+ Confluence pages across 10 team spaces (as of Aug 2026), giving ten cross-functional teams a shared, navigable map of the microservices architecture.
- Audited repositories and documentation for UK GDPR and India DPDP compliance, then worked with developers to close the gaps found.
- Kept releases on track by coordinating QA priorities — surfacing complex defects through regression testing and database validation — and by breaking requirements into developer tasks, with twice-daily stand-ups and AI-generated action-item tracking from meeting transcripts.

Independent product engineering — The KodSpot platform suite

Feb 2026 – Present

Sole engineer for three multi-tenant SaaS platforms — architecture, build, deployment, security, and live operations — developed outside primary employment. Shared foundation: Node.js/Fastify, PostgreSQL/Prisma, Docker, GitHub Actions CI/CD, Cloudflare R2, strict per-organisation tenant isolation.

KodSpot Housekeeping (WTMS)

In daily production at a hospital · app.kodspot.in · GCP

- Built the operations platform a hospital now relies on daily: QR-verified cleaning with photo evidence and duplicate-photo fraud detection, staff attendance and leave management, maintenance ticketing with public QR reporting, and NABH accreditation compliance reports.
- Designed the AI assistant for cost first: an SQL-first router answers most operational questions at zero model cost, with per-organisation token budgets, usage alerts, and prompt-injection detection across Vertex AI, Gemini, and Azure OpenAI.
- Engineered for India's DPDP Act from day one — AES-256 encryption of sensitive PII at rest, personal-data export, automatic anonymisation of guest contact details, and full audit trails.

KodSpot Menu

Live commercial SaaS · kodspot.com

- Run a live subscription business on my own payments engineering: Razorpay billing with idempotent activation across webhook and client paths, duplicate-charge protection on renewals, a 14-day trial funnel, and a full plan upgrade/downgrade lifecycle.
- Chose privacy by design for analytics — hashed, salted visitor identifiers, no raw IP storage — with DPDPA-aligned retention including six-year payment records for GST compliance.

KodSpot Electrical Platform

Pre-launch (Q3 2026) · AWS

- Hardened the platform through a formal 17-work-package production-readiness programme: an enforced engineering charter, documented architecture decisions, and 256 CI-gated automated tests (as of Jul 2026) — including a tenant-isolation regression suite for every tenant-owned resource.
- Built resilience as shared primitives rather than per-feature effort — database and AI-provider circuit breakers, lock-safe scheduled jobs, and health-gated deployments that stop broken changes reaching production.

Full-Stack Developer (Freelance) — Avant Data Ltd, UK (Remote)

Jun 2023 – Dec 2025

- Delivered a full-stack e-commerce application (Angular, TypeScript, Node.js, MongoDB, JWT authentication) that the company adopted as its internal reference for demonstrations; automated build and deployment with GitHub Actions to Azure.
- Built and SEO-optimised websites for Avant Data and a partner agency; tested APIs with Postman and Selenium.

Earlier career (2018–2022): operations supervision (Ace Comfort Solutions) and teaching (KLE International School) alongside a distance master's degree, before a full-time transition into software engineering across 2022 and 2023.

TECHNICAL SKILLS

LANGUAGES	JavaScript, TypeScript, Python, SQL
BACKEND	Node.js, Fastify, Express.js, REST APIs, Prisma ORM, Zod validation, JWT/bcrypt authentication
FRONTEND	React, Angular, progressive web apps (vanilla JS), Astro, Tailwind CSS, SCSS
DATABASES	PostgreSQL, MongoDB, MySQL, Redis
CLOUD & DEVOPS	Docker, Docker Compose, GitHub Actions CI/CD, AWS (EC2, S3), Azure (VMs, Blob Storage, DevOps), GCP (Compute Engine, Vertex AI), Caddy, Nginx, Cloudflare R2
AI ENGINEERING	Azure OpenAI, Vertex AI / Gemini, n8n workflow automation, LangChain, prompt engineering, LLM cost controls, prompt-injection defence
SECURITY & COMPLIANCE	Multi-tenant isolation, AES-256-GCM PII encryption, rate limiting, UK GDPR and India DPDP audit experience
QUALITY & PROCESS	Integration testing (node:test), Selenium, Postman, CI test gating, architecture decision records, Confluence, JIRA

EDUCATION

B.E., Electrical & Electronics Engineering

Visvesvaraya Technological University (AITM), India
2014 – 2018

M.Sc., Yoga

Annamalai University (distance education), India
2020 – 2022

CERTIFICATIONS

Career Essentials in Generative AI (Microsoft) · DevOps Professional Certificate (PagerDuty & LinkedIn) · MLOps Fundamentals (Scaler) · JavaScript Foundations Professional Certificate (Mozilla)
